

Sergey Kudelin

AI / Forward-Deployed Engineer · Miami, FL

sergey@sergeykudelin.com · sergeykudelin.com · github.com/Seryozh · linkedin.com/in/sergeykudelin

I build customer-facing AI products end to end. Most recently I embedded with the founder of **FutureClinic (a Y Combinator-backed startup, F24)** and owned the growth engine from the ground up: the AI systems that find, verify, and win doctors, and the co-worker agents like Nikola that ran the outreach on their own. Before that, I spent 3 years building with AI for real businesses and for myself, including **Lux**, a coding agent I shipped to my 200K-subscriber YouTube channel that reached 3,000+ installs.

EXPERIENCE

GTM Engineer (Contract) · **FutureClinic** · **Y Combinator F24** Mar – May 2026 · Remote, Miami

FutureClinic lets any doctor launch a chat-based digital clinic. I built its GTM engine end to end, directly with the founder.

- **FC Outreach** ↗ Discovery across YouTube and Instagram, license verification against the federal NPI registry, then a personalized landing page ([dr_mamina](#)) and founder video for every doctor, rendered with Whisper word-level alignment + ffmpeg chroma-key. Run by Nikola, an autonomous agent on Modal (Claude Agent SDK, filesystem-as-brain). 15% reply rate on cold outreach.
- **FC Creators** ↗ 6-stage content pipeline (Topics → Titles → Thumbnail → Questions → Script → Export) that learns a doctor's voice and drafts ready-to-record videos, human-in-the-loop throughout. Next.js + Supabase + Docker workers, orchestrating Claude Opus + Sonnet, FAL, Supadata, Apify. Live and in active use by doctor-creators at [futurecliniccreators.com](#).

"Phenomenal work, the kind of product I was genuinely excited to use myself. I recommend Sergey without reservation."

Dr. Usama Syed · Founder, FutureClinic (YC F24) · [usama@futureclinic.com](#) · [Full letter](#) ↗

Marketing & SEO · **Gray & Sons** Summer 2025 · Miami

Helped build [sellusyourjewelry.com](#), the company's high-end watch buying site, and ran AI-assisted SEO content and lead workflows. My first production AI work at a real business.

PROJECTS

- DermHunter** ↗ AI doctor-discovery pipeline, built solo in two nights to apply to FutureClinic. They hired me to ship it as a production system.
- Lux** ↗ Autonomous coding agent shipped through my 200K-subscriber YouTube channel (@SergeCode) to 3,000+ installs. Closed-loop hash check verified every edit before it landed.
- LogiScan** ↗ Phone-camera + Gemini package auditor with pixel-perfect bounding boxes. Turned a 90-minute nightly audit into about 10, at roughly \$0.002 a scan.

EDUCATION

Computer Science · Florida International University

TOOLS

TypeScript · Python · SQL · Claude Agent SDK · Opus/Sonnet · GPT-4o · Gemini Vision · Whisper · LangGraph · FAL · Next.js · FastAPI · Modal · Supabase · Playwright · Apify · Exa · Supadata · NPI Registry
