

Sergey Kudelin

Founding / AI / Forward-Deployed Engineer · Miami, FL

sergey@sergeykudelin.com · sergeykudelin.com · github.com/Seryozh · linkedin.com/in/sergeykudelin

I build AI products end to end and ship them to production fast, most of it on the GTM side where the code moves revenue directly. Most recently GTM engineer at **FutureClinic (Y Combinator F24)**, building the growth engine alongside the founder.

EXPERIENCE

GTM Engineer (Contract) · **FutureClinic** · **Y Combinator F24**

Mar – May 2026 · Remote, Miami

FutureClinic lets any doctor launch their own chat-based digital clinic. AI takes the patient history and drafts each case; the doctor reviews and signs. I partnered directly with the founder on the company's GTM engine, targeting physician-creators whose social audiences double as built-in patient pipelines.

- **FC Outreach** ↗ Discovery pipeline mining YouTube and Instagram for physician-creators, followed by license verification against the federal NPI registry (Playwright + residential proxies). Per-doctor personalized landing pages (futureclinic.app/dr_mamina) and per-doctor personalized videos rendered via Whisper word-level alignment + Playwright capture + ffmpeg chroma-key composite. Outreach agent ("Nikola") on Modal, Claude Agent SDK (Opus 4.7), filesystem-as-brain.
- **FC Creators** ↗ 6-stage AI content pipeline (Topics → Titles → Thumbnail → Questions → Script → Export) that learns each doctor's existing social presence and drafts ready-to-record videos in their voice. Human-in-the-loop at every step. Next.js + Supabase + Docker worker pools, orchestrating Claude Opus + Sonnet, FAL, Supadata, Apify. Live with physician-creators today.

"Phenomenal work. The kind of product I was genuinely excited to use myself, and that is the highest bar I know for whether something has been built well. I recommend Sergey without reservation."

Dr. Usama Syed · Founder, FutureClinic (YC F24) · usama@futureclinic.com · [Full letter](#) ↗

PUBLIC WORK

SergeCode + Lux. Built a 200K-subscriber audience on YouTube (youtube.com/@SergeCode) since 2018, then shipped **Lux** (github.com/Seryozh/lux-agentic-ai), an autonomous coding agent, through that channel: ~2,500 installs, ~90% lower token cost per request.

EDUCATION

Computer Science · Florida International University
